

SPL405-300-C105M

- Fiber-Coupled Laser Diode
- 405 nm, 300 mW
- 105 μm Multimode Fiber

Description

SPL405-300-C105M is a violet fiber-coupled laser diode, typically emitting at 405 nm with an output power of 300 mW. It comes in a coaxial package with a mounting bracket, 105 μm multimode fiber and FC/PC connector.

Additional options such as closer peak wavelength selection, alternative fiber connector or package are available on request.

Maximum Rating ($T_{\text{CASE}} = 25^{\circ}\text{C}$)

Parameter	Symbol	Values		Unit
		Min.	Max.	
Reverse Voltage	V_R		2.0	V
Operating Temperature	T_{OPR}	0	+ 50	$^{\circ}\text{C}$
Storage Temperature	T_{STG}	- 40	+ 85	$^{\circ}\text{C}$
Soldering Temperature (max. 3s)	T_{SOL}		+ 260	$^{\circ}\text{C}$

Electro-Optical Characteristics ($T_{\text{CASE}} = 25^{\circ}\text{C}$)

Parameter	Symbol	Values			Unit
		Min.	Typ.	Max.	
Peak Wavelength *1	λ_P	395	405	415	nm
Spectral Width (FWHM)	$\Delta\lambda$		2.0		nm
Output Power	P_O		300		mW
Threshold Current	I_{th}		140	200	mA
Operating Current	I_F		360	380	mA
Operating Voltage	V_F		4.5	5.5	V
Fiber Specification	Type	UV Multimode			
	Core		105		μm
	Connector *2	FC/PC			
	Length	80			cm

*1 optional: down to ± 5 nm

*2 optional: SC or SMA905

Precautions

Safety

Caution: Laser light emitted from any laser diode may be harmful to the human eye. Avoid looking directly into the laser diode's aperture when the diode is in operation.

Note: The use of optical lenses with this laser diode will increase eye hazard

ESD Caution

Always do handle laser diodes with extreme care to **prevent electrostatic discharge**, the primary cause of unexpected diode failure. To prevent ESD related failures we strongly advise to always **wearing wrist straps**, and **grounding all applicable work surfaces**, when handling laser diodes

Operating Considerations

We strongly advise to only operate this laser diode with a current source. The current of a laser diode is an exponential function of the voltage across it. **Usage of current regulated drive circuits is mandatory.**

Laser diodes may be damaged by excessive drive currents or switching transients

It is advised, to operate the laser diode at the lowest temperature possible, and to never exceed maximum specifications as outlined in the datasheet. Device degradation will accelerate with increased temperature. **Proper heat sinking will greatly enhance stability and life-time of the laser diode.**
