

## PD36-05 series

- Mid-IR PD Series
- Max. Sensitivity: 2.2 – 3.4  $\mu\text{m}$
- Sensitive Area Diameter:  $\varnothing$  0.5 mm

### Description

**PD36-05 series** are fabricated from narrow band-gap InAsSb/InAsSbP-based heterostructures lattice matched to InAs substrate. The maximum sensitivity wavelength is specified with 2.2 – 3.4  $\mu\text{m}$  and a cut-off wavelength at 3.6 – 3.7  $\mu\text{m}$ . The photodiode chip has a photosensitive area of  $\varnothing$  0.5 mm and can be mounted into different options of packages. You can choose between TO-can, with additional parabolic reflector (R), window (W), containing thermoelectric cooler and thermoresistor (T), and as aluminum tube with built-in preamplifier.

## Recommended Modes of Photodiode Operation

We recommend using **photovoltaic mode** when the PD is not used in reverse bias. Use photoconductive mode (mode with reverse bias) with caution!

### Important Cautions:

- Check your connection circuits before turning on the PD.
- Mind the PD polarity: PD anode is marked with a RED dot.
- DO NOT connect the PD to the multimeter.

## Precautions

---

### Soldering:

- Do avoid overheating of the PD
- Do avoid electrostatic discharge (ESD)
- Do avoid mechanical stress, shock, and vibration
- Do only use non-corrosive flux
- Do not apply current to the LED until it has cooled down to room temperature after soldering

### Static Electricity:

PDs are sensitive to electrostatic discharge (ESD). Precautions against ESD must be taken when handling or operating these PDs. Surge voltage or electrostatic discharge can result in complete failure of the device.
